

Basic Beamer

institute

Required packages

1. beamer
2. pgf
3. etoolbox
4. ms
5. url
6. sansmathaccent
7. filehook
8. translator

Themes

You can find beamer themes on **beamer-theme-matrix**

You can apply color theme together with theme

You may be able to create your own color theme by the command
`\definecolor`

You can set background color by using command

`\setbeamercolor{background canvas}{bg=color}`

Basic

Create a block

Line one of this block

Line two of this block

You can change text color

One frame can contain multiple slides.

You can also set details that appear on which slide in a frame by using the command `\only`.

You can only break this line by `\linebreak`, I don't know why

You can also use `onslide` to do so, but it is only hidden

Note that `onslide` is only to hide the text, which means to make them transparent This will only show in slides one and two, you can see this is affected by hidden text

This will show in the slides after slide one

Basic

One frame can contain multiple slides.

You can also set details that appear on which slide in a frame by using the command `\only`.

This will only show in slide two, it will completely delete

You can also use `onslide` to do so, but it is only hidden

Note that `onslide` is only to hide the text, which means to make them transparent This will only show in slides one and two, you can see this is affected by hidden text

This will show in the slides after slide one

Basic

One frame can contain multiple slides.

You can also set details that appear on which slide in a frame by using the command `\only`.

You can also use `onslide` to do so, but it is only hidden

Note that `onslide` is only to hide the text, which means to make them transparent This will only show in slide three This will show in the slides after slide one
